

## “KEVIN AND AVONTE’S LAW”

S. 2614

(Introduced March 1, 2016)

U.S. Sens. Chuck Grassley, R-IA, and Chuck Schumer, D-NY, have introduced bipartisan legislation in honor of two young boys from their home states of Iowa and New York. Each boy was diagnosed with autism. Each boy wandered away from a supervised setting. And each drowned. One of the boys, nine year-old Kevin Curtis Wills, died in 2008 after jumping into the Raccoon River near his home town of Jefferson, Iowa. The other, high school student Avonte Oquendo of Queens, New York, drowned in NYC’s East River in 2014.

**Need for Legislation:** Families with developmentally disabled children and aging parents often experience challenges that others do not face on a daily basis. E.g., it’s common for many children with autism or seniors with Alzheimer’s disease to wander away from their caregiver’s supervision—with sometimes tragic results.

If an ounce of prevention is worth a pound of cure, renewing the federal “Missing Alzheimer’s Disease Patient Alert program” makes sense for public safety. Extending the federal program would benefit the thousands of families keeping watch 24 hours a day, 7 days a week of a vulnerable family member with Alzheimer’s disease or other forms of dementia.

It also makes sense to expand this program to cover children with developmental disabilities, such as autism, whose condition leads them to wander away from their families or caregivers. The number of children diagnosed with autism continues to climb, and about a third of children with autism had wandered in the last year, according to a recent survey.

**Summary of Bill Provisions:** Parents and caregivers who have ever experienced the frantic search for a missing loved one with special needs no doubt feel powerless, or even hopeless, if the search turns from hours into days. This bill aims to give them some peace of mind by:

**Revising and extending the federal missing patient alert program.** This program, which Congress established to meet the needs of Alzheimer’s patients who go missing, originally was authorized at \$900,000 annually. S. 2614 would increase its authorized funding level to \$2 million per year and would expand the program to ensure that other Americans with dementia or developmental disabilities also would be covered. The program would be re-named the “Missing Americans Alert Program.”

**Making resources available to deploy the use of technology to help unite missing family members before tragedy occurs.** S. 2614 would authorize DOJ grants to be used for the purchase of tracking technology to help the families of a child with developmental disabilities recover their child in the event that child becomes separated from their parents or caregivers.

**Providing resources for education and training activities to help prevent a vulnerable family member’s disappearance or, in the event a child with developmental disabilities or a senior with dementia goes missing, take immediate action to return that family member to safety.** DOJ grants could be used by nonprofits or law enforcement agencies to develop training and emergency protocols for school officials and first responders; to increase personal safety and survival skills of vulnerable individuals with these conditions; or to operate notification systems for alerts and advisories to aid in an endangered missing individual’s recovery.

**Endorsements:** Alzheimer’s Association, American Society on Aging, Autism Speaks, Autism Safety Coalition, The Arc, National Autism Association, National Center for Missing and Exploited Children, Safe Minds, Autism Society of Iowa, ANCOR (American Network of Community Options and Resources).
